Portfolio Proposal

Prepared for **Ms Lee Ka Yan** (fictional client), age 41 · 30 October 2026 · RiskFit Private Wealth Proposal Engine

Your risk profile

Balanced

Level 3 of 5. Wants a balance of growth and stability. Accepts moderate ups and downs.

Investment amount	**USD 1,500,000**
Attitude to risk score	**19 out of 25**
Investment horizon	**More than 10 years**
Largest loss you can accept	**Up to 35%**
Cash needs (next 12 months)	**No withdrawals planned**

Recommended allocation

Asset class	Weight	Amount
Equities (US large-cap) SPY ETF	**54%**	USD 804,000
Investment-grade bonds AGG ETF	**41%**	USD 621,000
Cash (T-bills) BIL ETF	**0%**	USD 0
Gold GLD ETF	**5%**	USD 75,000

What to expect

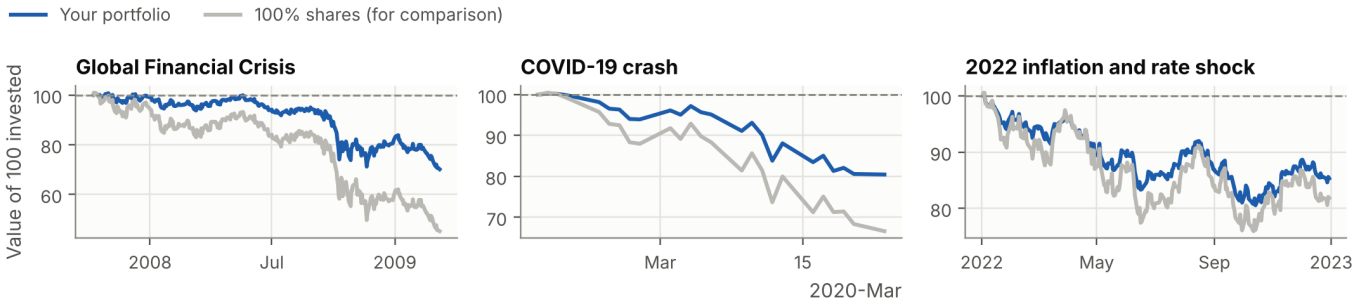

Expected return per year
5.6%
Long-term assumption, before fees

Typical yearly range
-5% to +16%
About 2 years in 3 should fall in this range

Worst historical fall
-30%
Global Financial Crisis: about USD 455,000 at the lowest point; back to its previous peak in 13 months

How this portfolio would have done in past crises

Crisis	Period	Return over the crisis	Largest fall	Largest fall in USD	Time to recover
Global Financial Crisis	Oct 2007 – Mar 2009	-29.9%	**-30.4%**	-USD 455,000	13 months
COVID-19 crash	Feb 2020 – Mar 2020	-19.5%	**-19.8%**	-USD 296,000	3 months
2022 inflation and rate shock	Jan 2022 – Dec 2022	-14.7%	**-19.5%**	-USD 292,000	14 months

Value of 100 invested at the start of each crisis. 2022 is a warning: inflation pushed shares and bonds down together, so bonds gave little protection that year.

Why this mix suits you

Your attitude to risk (score 19 out of 25) points to Moderately Aggressive. The maximum loss you can accept (up to 35%) limits the profile to Balanced.

This Balanced portfolio aims for the best long-term return we can expect while keeping the ups and downs within what you told us you can accept. Each part has a job: 54% in shares to drive long-term growth (they also cause most of the ups and downs); 41% in high-quality bonds to provide income and usually cushion falls in share prices; 5% in gold to add diversification, as gold has tended to hold its value in financial crises.

In a typical year we expect a return of about 5.6%, and in roughly two years out of three the result should fall between -5% and 16%. In the worst crisis we tested (Global Financial Crisis) this mix fell 30% at its lowest point, which is within the 35% limit for this profile. Losses like this are temporary only if you can stay invested, so please keep money you may need soon outside the portfolio or in its cash part.

For illustration only. Not investment advice. This proposal was produced by RiskFit, a student portfolio project, for a fictional client. It is not an offer or recommendation to buy or sell any security. Figures use historical ETF data as stand-ins for each asset class and ignore fees, taxes and currency effects (USD base; HKD is pegged to USD). Expected returns are assumptions, not promises. Past performance is not a reliable indicator of future results, and the value of investments can fall as well as rise.
Data: daily total-return prices of SPY, AGG, BIL, GLD from 31 May 2007 to 29 Oct 2026 (Yahoo Finance). Portfolios are rebalanced daily in the historical tests.
